

# ACKNOWLEDGEMENTS

---

All the work presented in this thesis required the collaboration of a number of South African, African and international colleagues. I would like to express my sincere appreciation for their willingness to participate in the research work and the valuable contribution made by each author cited on the six publications that constitute this dissertation. Four of the papers report on work conducted in the undergraduate MBChB programme at the University of Cape Town (UCT), South Africa. The remaining two papers respectively report on work conducted in collaboration with South African colleagues representing the Colleges of Medicine of South Africa, and a number of African colleagues representing three other medical training facilities in sub-Saharan Africa. Three international collaborators also participated in the work presented in this thesis. They are Professors Henk Schmidt from Erasmus University, Rotterdam, the Netherlands, Cees van der Vleuten from Maastricht University, Maastricht, the Netherlands and Geoffrey Norman from MacMaster University, Hamilton, Canada.

Professor Schmidt served as the promoter of this thesis. I would especially like to thank him for his insight and vision that sparked the writing of this thesis, his enthusiastic support and helpful advice throughout the time it took to compile the work, and finally, his unwavering belief in my ability to successfully complete the task. Professor Schmidt, I would not have realised one of the greatest dreams of my life if you had not walked across my path and taken the time to listen to the simple research observation that became the foundation of this work. Thank you, Henk.

I would also like to thank the Foundation for the Advancement of International Medical Education and Research (FAIMER), a non-profit organization committed to advancing medical education research and improving medical education practices in developing world regions, for providing financial assistance enabling me to attend the defence of my thesis at Erasmus University in Rotterdam, the Netherlands.

In addition, I would also like to thank Mrs. Dorothea Bransby, affectionately known to me as “Dot”, for the endless cups of tea, hundreds of pages of editing, countless Internet searches for appropriate research articles and sustaining support throughout the process of collating this thesis. Thank you, Dot.

Finally, I would like to thank Linda, my life partner, for being patient and kind while I spent days, nights and weekends typing endless drafts of this document. Linda, thank you for walking beside me each step of the way on this long journey.
