

Approaches towards the Application of Tax Incentives for Cross-Border Philanthropy

Renate Buijze*

Most governments of high income countries stimulate domestic philanthropy. For philanthropy crossing borders, however, governments are less consentient. These varying standpoints are reflected in the tax legislation of countries. In many of the countries concerned, donations to domestic charitable causes are rewarded with a tax incentive. When a donation crosses borders, however, the tax incentive does not always apply.

This article examines the different approaches governments hold towards the application of tax incentives in cross-border situations and the underlying rationales. Through the analysis of the relevant tax sources, tax jurisdictions are classified into four common models that summarize the spectrum of different approaches governments hold. They vary from jurisdictions that support cross-border donations with a tax incentive to governments that restrict tax incentives to donations within the country and two models that represent the more moderate approaches between these extremes.

I INTRODUCTION¹

Philanthropy is increasingly becoming a cross-border phenomenon, where benefactors contribute to foreign causes and charities aim at raising donations outside their country of residence. In most high income countries domestic charitable gifts are stimulated with a tax incentive. In a cross-border situation this is not so self-evident and approaches of governments vary largely.

Until recently, the application of a tax incentive on a cross-border donation was not under discussion. Governments granted tax incentives to donations to support charities. Cross-border donations were not common, so no pressing issue either. Due to internationalization cross-border transactions increased, including philanthropy. This put the application of tax incentives to cross-border donations onto the political agenda. Some governments want tax benefits to be spent within their own territory. Other governments are willing to stimulate donations to foreign charitable causes. Despite the growing attention for cross-border philanthropy, an overall global picture of how different governments deal with the tax issues involved is lacking.

This article examines the different approaches governments hold towards the application of tax incentives to cross-border donations. What are the

dominant approaches? And which arguments underlie the decision to apply a tax incentive to a cross-border gift? I try to answer these questions by analysing and comparing the relevant tax sources. These can be found in domestic tax law, tax treaties and multilateral agreements.

The comparison of the tax jurisdictions is limited to the application of tax incentives to charitable donations in personal income tax and consequently the article is limited to charitable donations by individuals. The tax incentives can take different forms: a deduction from taxable income, a credit on tax due, a percentage designation scheme for taxpayers and variations to the incentives summed up. The tax incentive always concerns the tax incentive applicable in the country where the donor is resident for tax purposes. In case there is no tax incentive available for charitable giving in the concerned jurisdiction, as a matter of course, the donor cannot obtain a tax incentive for a cross-border donation either. When using the concept of charity, or charitable organization, it implies an organization that qualifies under the relevant tax legislation as an organization that contributes to the public benefit and therefore is eligible to receive donations that qualify for a tax benefit.

Through inductive reasoning, the array of countries is reduced to models that represent the main approaches towards the application of tax incentives to cross-border

The author would like to thank Prof. Dr Sigrid Hemels for her helpful comments on the draft article, Prof. Dr Heike Jochum of the Universität Osnabrück for providing information on Germany, Prof. Dr Kazuko Goto of Saitama University for providing information on Japan, Isabelle Heuzé for providing information on France and the two anonymous peer reviewers for their swift and helpful comments.

charitable giving. The focus lies on high income countries, as defined by the World Bank,² since the percentage of high income countries that offer incentives to individual donors is substantially higher than amongst low income countries, respectively 87% and 44%.³ Furthermore, philanthropic potential is larger in high income countries.

The article addresses the arguments underlying the different approaches to the application of tax incentives in cross-border situations, after a background section on tax incentives and cross-border philanthropy. This section goes back and forward between existing research on tax incentives for international philanthropy and the measures that can be used to apply or restrict tax incentives for cross-border philanthropy, in order to provide a comprehensive overview. Finally, a legal comparison is made between the approaches of several countries. Based on this comparison the different approaches are reduced to four models, which provide for a rough distinction between countries.

2 BACKGROUND - TAX INCENTIVES FOR CROSS-BORDER PHILANTHROPY

Tax incentives are a widespread tool to achieve policy objectives by stimulating private initiatives. Philanthropy is one of the sectors where tax incentives are frequently applied and scholars have elaborated on the different forms these tax incentives can take.⁴ The different manners in which countries apply tax incentives to stimulate philanthropy have been compared. The index *Rules to Give by. A Global Philanthropy Legal Environment Index*,⁵ however, is among the first to provide an extensive overview of the different tax incentives for charitable donations used around the world. The overview of laws shows that amongst the 177 United Nations (UN) Member States analysed, the majority of 66% offer a tax incentive for giving by individual donors.⁶ When concentrating on high income countries, the level is even 87%, whereas this is only 44% in low income countries.⁷

As said, this is one of the reasons this article focuses on high income countries. Although the report gives a great overview of the common legal practices around the world, the report, however, is limited to the domestic support for philanthropic organizations. Whether tax incentives also apply for cross-border donations is outside the scope of this report and to my knowledge there is not such an overview available.

The topic, the tax treatment of charitable organizations and their donors, did receive attention of governments, scholars and practitioners in recent years. Amongst others in 2006, when the European Court of Justice (hereinafter ECJ) in a preliminary procedure in the case *Stauffer*, on the tax exempt status of an Italian charity with commercial properties in Germany, explicated that in accordance with European Union (EU) law comparable charitable organizations in other EU Member States should not be discriminated based on residency requirements.⁸ This initial case was followed by four more cases on the tax status of charitable organizations and their donors in the EU: *Persche*,⁹ *Missionwerk*¹⁰, *Commission v. Austria*¹¹ and *Commission v. France*.¹² Of these cases the *Persche* case is the most relevant for this article, since this case concerns the taxation of donors. In this judgment the ECJ ruled in line with the *Stauffer* case, that based on the free movement of capital comparable donations to charitable organizations should be treated equally, regardless whether it concerns a donation within an EU Member State or crossing borders between two EU Member States. The ECJ does not require countries to mutually recognize each other's charities. The ECJ however did highlight that the tax authorities can require the taxpayer to provide such proof as the residence country of the donor may consider necessary in order to determine whether the conditions for deducting expenses provided for in the legislation at issue have been met and, consequently, whether to allow the tax incentive requested.¹³

The tax treatment of charitable organizations in cross-border situations in the EU has been discussed in

academia.¹⁴ Subsequent to the decisions of the ECJ academics examined whether the tax laws of EU Member States are compatible with EU non-discrimination law and allow for tax incentives for cross-border gifts.¹⁵

The attention for the tax treatment of cross-border philanthropy in Europe provokes a comparison with cross-border donations on the other side of the Atlantic Ocean. Since the late 1960s donations to organizations set up in the United States (US) that spend their funds on charitable or educational purposes in foreign countries are deductible, based on several revenue rulings.¹⁶ In 1972 these Internal Revenue Service rulings were incorporated into the legislation.¹⁷ Foreign organizations can set up a 'friends of' organizations under the laws of the US to raise funds for a specific charitable organization abroad. Through this 'friends of' organization the American donors can claim a tax relief,¹⁸ which is widely used among American taxpayers. In most European countries it is also possible to establish a 'friends of' organization, however, this is less frequently used than in the US. Allowing for tax incentives for donations to 'friends of' organizations that eventually are spent abroad, makes it possible with a unilateral measure to indirectly contribute to foreign charitable causes with a tax benefit. Direct donations to charitable organizations established abroad are not rewarded with a tax deduction.¹⁹

In a panel session on the topic during the 2012 annual congress of the International Fiscal Association in Boston the US was compared with Europe concerning the tax treatment of charitable organizations and their donors in cross-border situations.²⁰ Koele compared the tax aspects of cross-border philanthropy for two European countries (Germany and the Netherlands) with that of the US.²¹ She dealt with the different legal levels where the tax treatment of cross-border philanthropy can take place. She

examined the domestic tax legislation in all three countries, EU law and also included bilateral tax treaties.

The example of the US shows how domestic tax legislation can handle the tax treatment of cross-border philanthropy. Bilateral tax treaties are another legal source that can be used to agree on the application of tax incentives for donations in cross-border situations. In the standard model tax treaties by the United Nations²² and the Organisation for Economic Co-operation and Development (OECD)²³ a provision on the application of tax incentives to donations, however, is not included, so no commentary is available either. If countries use one of these models as a starting point for treaty negotiations, the tax treatment of charitable contributions would not implicitly be included. If these countries want a provision on the tax treatment of charitable contributions in their tax treaty, they would thus have to bring this to the table for negotiation explicitly, next to the model treaty. The bilateral tax treaties the US concluded with Canada, Israel and Mexico, for example, all include a provision in which they mutually agree to apply the available tax incentives for donations in cross-border situations.²⁴

Returning to the academic literature, Heidenbauer et al. compared the US with two EU countries: the Netherlands and Austria.²⁵ Furthermore, they added Australia to the comparison: a country that hardly leaves any room for tax incentives on donations to foreign charities. After describing the situation concerning tax incentives for cross-border gifts in these countries and the implications of the EU law, the authors continue with the use of bilateral tax treaties to allow for tax incentives for cross-border gifts and other pathways that have the potential to allow for tax incentives in cross-border situations: the European Foundation and the use of local intermediary charities. The latter is also addressed by

Hemels and by Koele in the form of Transnational Giving Europe.²⁶ I will pay more attention to it after explaining what the European Foundation entails.

In 2012 the Proposal for a Council Regulation on the Statute for a European Foundation (FE) was presented.²⁷ Aim of the FE was to introduce a new European legal form that would be recognized in all Member States to facilitate cross-border activities by charitable organizations within the EU. The Proposal included a provision on the tax treatment of donors to the FE,²⁸ which had the potential to enable tax incentives for cross-border donations within the EU. By November 2013, however, this provision was excluded in the discussion of the Proposal.²⁹ At the end of 2014, it was proposed to withdraw the Proposal due to a lack of prospects that an agreement could be reached.³⁰ Between launching the Proposal in 2012 and the proposed withdrawal in 2014 academics had reached the same conclusion: the European Foundation only had the potential of a partial solution, since it required charitable organizations to be active in multiple countries and it did not seem efficient for countries that had to establish a supervisory structure. Foremost, legal scholars had forecasted that it would cause great difficulties to achieve unanimity amongst Member States, since the Proposal required Member States to trust each other's supervisory structures.³¹

Thus, for the moment the FE is no measure to regulate the application of tax incentives to cross-border philanthropy. However, the FE was not the first idea along these lines. An earlier suggestion was that by the Canadian legal scholar Drache.³² He suggested to create a mutually accepted definition of the activities that qualify as 'charitable' in an international setting, such as international disaster relief efforts, the promotion of democratic ideals, preservation of heritage sites and medical research. Countries would allow the applicable tax incentive for cross-border donations in case it concerned these mutually agreed on charitable activities. This would allow donors to rely on the tax facilities in their country when contributing to a charity abroad and it would allow

countries to maintain their tax regime. This idea, however, also remains a suggestion.

A measure that is used in practice is the local intermediary organization.³³ The local intermediary organization is not a sheer legal measure, like the provisions in domestic tax law and in bilateral tax treaties or the application of the ECJ decisions. Instead, it is an initiative of collaborating charitable organizations that make strategic use of the existing provisions in the applicable tax sources. Within these collaborations, a donor who wants to make a contribution to a charity abroad transfers the donation to a local intermediary charity that is eligible to receive donations with a tax benefit. By donating to a domestic charity, the donor receives the tax incentive which is applicable in his tax jurisdiction. The local intermediary charity transfers the donation to the intended recipient organization abroad. An example of a local intermediary organization in the US is the King Baudouin Foundation United States.³⁴ Transnational Giving Europe is an example of a network of several local intermediary organizations in different European countries.³⁵ Countries can restrict the use of this measure by adding requirements on the qualifying charitable organizations and donations in the domestic tax law. If, for example, domestic tax legislations restrict tax incentives to donations spent within the country, this measure cannot be used to obtain a tax incentive on a cross-border donation in that country. Countries could also decide in their domestic tax legislation to limit tax incentives for cross-border donations to specific causes, such as international aid or disaster relief.

Although there are legal measures and practical solutions to apply tax incentives for cross-border donations, not all governments might embrace these measures. Some might not want to stimulate donations that leave their territory with a tax incentive. In addition, others might only want to do so in order to stimulate a specific policy goal. The next paragraph discusses the underlying arguments for these standpoints.

3 RATIONALES IN FAVOUR AND AGAINST THE USE OF TAX INCENTIVES TO SUPPORT CROSS-BORDER PHILANTHROPY

With the increase in cross-border philanthropy, as part of the increasing amount of cross-border transactions, governments take their standpoint towards the application of tax incentives to cross-border donations. Prior to this decision, governments have to decide whether they want to include a tax incentive for charitable giving in their tax code. Academics have written a substantive literature on the use of tax incentives for charitable giving.³⁶ When comparing tax incentives with direct subsidies, it is claimed that tax incentives are difficult to target at specific government objectives, they are inefficient, and shift allocation power from the government to high income taxpayers. Furthermore, tax incentives go against the ability to pay principle and unequal circumstances arise, or are increased, among taxpayers. Also, they harm the comprehensiveness and simplicity of tax legislation. Finally, it is difficult to control the size of the tax expenditures, since they are not visible on the budget of the government and are often 'open end' measures. Advantages of tax incentives are that they allow for a decentralized decision making, it is less led by the public sector and enlarges consumer sovereignty. Most important, tax incentive decreases the cost of the gift compared to other consumption and since charitable giving is price elastic, charitable giving increases. This brief summary does not aim at a complete and extensive overview, for which I refer to others who have done this in a more nuanced way.³⁷ In the end, it is a political decision to decide whether or not to apply a tax incentive for charitable giving. The following discussion assumes that these issues have been decided. Governments who do not see any purpose in the use of tax incentives to stimulate cross-border charitable giving will not include it in their personal income tax, and thus domestic, nor cross-border donations are rewarded with a tax incentive. For those countries that have included a tax incentive for charitable giving in the personal income tax, it is relevant to decide whether this incentive also applies to cross-border donations. If a tax incentive for charitable giving is

included in the personal income tax, governments can decide whether this incentive only applies to domestic donations or whether it applies for cross-border donations as well.

One of the reasons why taxes are levied is to finance government obligations. Tax incentives, however, are applied at the expense of tax revenue and therefore, the term 'tax expenditures' is also used.³⁸ Applying a tax incentive on a cross-border donation implies an expenditure of tax revenue to a cause in another country. Subsequently, there is a lack of national benefit, or more specific: public benefit for the inhabitants of the donor country is lacking. Thus, according to this reasoning, no rationale exists to grant a tax incentive.³⁹ As Heidenbauer et al. phrase it: '*The fiscal objective of relieving the public budget from the need to fund the purposes pursued by charitable organizations, which can only be achieved if the beneficiary of the charitable contribution is resident in the same country as the donor.*'⁴⁰ I, however, think this argument should be used in a more nuanced manner. Whether a private donation to a foreign charity relieves part of the government burden or does not, depends on what 'government burden' constitutes. In case government burden solely includes tasks within the territory of the country, it is unjustifiable from this perspective to apply a tax incentive for cross-border donations. The same holds when tax incentives are used as an alternative for direct subsidies to stimulate certain domestic policy objectives. In these cases countries have arguments to limit their tax incentives for charitable giving to the domestic situation. However, when part of the government burden is located outside the country's territory, as is the case with foreign aid and international affairs in many countries, it becomes easier to justify a tax incentive for a cross-border donation.

The stronger social and economic ties between countries, the more desirable it is for countries to allow for tax incentives in cross-border situations. This is what the bilateral tax treaty between the US and Canada illustrates. Their physical proximity, the large size of their bilateral trade, the huge number of tourists and employees travelling back and forward create great interest in the ability to make cross-border charitable donations.⁴¹ It, therefore, seems a matter of logical deduction that this is

the reason to include a provision on the application of tax incentives in the tax treaty. This same reasoning holds for supranational agreements. In order to strengthen the market within a supranational agreement tax incentives might apply to cross-border donations, whether or not on beforehand intended by the signing countries. This is what we see in the EU with the enforcement of the four fundamental freedoms as stipulated in the Treaty on the Functioning of the European Union (TFEU).⁴²

Creating a new legal entity for charitable organizations that is recognized throughout the EU, is currently a bridge too far for the EU Member States as we saw with the FE. One of the underlying reasons why the EU Member States could not agree on the FE, is because it requires trust in other country's supervisory authorities. In general, the lack of trust in other countries supervisory structures is a reason to restrict the application of tax incentives to gifts to domestic charities.⁴³ A lack of fiscal control over the foreign recipient organization could lead to donations being made with indirect government support to undeserving organizations.⁴⁴ The threat of abuse of tax incentives is another argument to restrict the use of tax incentives to the domestic situation. The use of local intermediary charities could overcome this issue, by requiring the intermediary organization to ensure that the donation is spent in line with the requirements.⁴⁵

Not only might countries have different standards concerning the fiscal supervision over charities, but also what a public benefit organization (PBO) entails differs among countries. Requirements imposed on PBOs, can vary widely. The minimum asset requirements for PBOs in one country can, for example, exceed the maximum assets of a PBO in a different country. A PBO in one country might thus not meet the requirements to become a PBO in another country.

Furthermore, the lack of a common understanding of the concept 'public benefit' or 'charity' can refrain governments from applying tax incentives to cross-border donations.⁴⁶ Both Drache and Bater, however, point out that strong overlaps also exist in the definition of public benefit of certain countries.⁴⁷ Examples of fields that are

generally agreed to deserve tax benefits are relief of poverty, advancement of health and education, international disaster relief efforts and preservation of heritage sites. The global public benefit these causes relate to could be a possible reason for some governments to stimulate private contributions to these causes through tax incentives.

Additionally, charities increasingly deal with transcending causes. Instead of increasing the public benefit of one country, they contribute to the public benefit of society as a whole, for example medical research.⁴⁸ Some of these transcending causes can only be realized in an efficient manner when dealt with in an international context. Finding and implementing a solution to the plastic soup, for example, can only be reached if countries collaborate.

Regardless of one's personal standpoint, the question whether a tax incentive should apply in a cross-border situation to support cross-border philanthropy must be answered with regard to the prevailing socio-political ideas in the country where the tax incentives are granted. These dominant ideas differ across countries and subsequently the answer to the question differs, resulting in a broad range of approaches towards the application of tax incentives in cross-border situations.

4 CATEGORIZING TAX JURISDICTIONS

The different approaches governments hold towards the application of tax incentives to cross-border philanthropy come forward in the comparisons made by legal scholars. They analysed the effects of the developments in EU law and compared the relevant tax provisions on the use of tax incentives for cross-border philanthropy of countries in and outside the EU. Each of them, for obvious reasons, focused on a limited amount of countries. A full overview of the countries that stimulate charitable giving with a tax incentive and which of them also grant the incentive in cross-border situations, however, is lacking.

Creating an extensive overview, for example adding on to the index of *Rules to Give by. A Global Philanthropy Legal*

Environment Index on UN Member States,⁴⁹ would be interesting. Gathering information on all countries that grant tax incentives on charitable donations of the 193 Member States, however, would be time consuming. In addition, one could wonder whether this is useful, since the majority of these countries most likely do not apply tax incentives in cross-border situations. In addition, tax law changes fast over time, especially in a topic in motion like cross-border philanthropy. Consequently, the overview would be outdated before even completed. Therefore, I propose to categorize countries into ideal types, according to the available measures to apply a tax incentive for cross-border donations.

Categorizing countries based on their tax jurisdiction has advantages. First of all, it produces an overview of the different approaches governments hold, without getting outdated easily. Second, since the tax jurisdictions are clustered based on the available measures to obtain a tax incentive for a cross-border donation, countries can be compared on their level of 'openness' towards the application of a tax incentive for cross-border donations. Furthermore, it provides insight in which measures donors can rely on to obtain a tax incentive when making a cross-border donation.

The use of ideal types does come with a drawback. Discussing tax jurisdictions in terms of ideal types requires a certain level of generalizability. Every jurisdiction, however, has its own peculiarities which require detailed analysis. Therefore, the use of ideal types only gives an indication of what can be done to obtain a tax incentive for a cross-border donation in a specific jurisdiction. Detailed analysis of the concerned jurisdiction is necessary though, if one is in search of information on a specific country. The ideal types, however, are intended to be helpful for a broad range of tax jurisdictions.

I cluster the different approaches into four ideal types, based on the measures available to obtain a tax incentive for a cross-border donation, not on the size of the potential tax benefit. The measures can be found at different legal levels. At the national level countries can grant tax incentives in cross-border situations under certain conditions. They can allow for a tax incentive on direct cross-border donations, or on cross-border donations through a local intermediary charity. At the international level countries can engage in bilateral tax treaties in which they recognize each other's charities and mutually apply their tax incentives to cross-border donations. The same can be agreed on a supranational legal level.

Countries can allow for tax incentives on donations to foreign charities based on different principles. They can grant the tax incentive if the foreign charity has a public

benefit status in the country where it is resident (home country control). This requires the country providing the tax incentive to rely on the regulations and requirements in the country of residence of the charity. The tax benefit can also be granted to a foreign charity based on the comparability of the foreign charity with a domestic charity (except for the place of residence), which entails host country control. Some countries require the foreign charity to be registered on a list of the tax authorities. Other countries require both home and host country control.⁵⁰

In section 2 a few country examples were provided, however, without relating the measures to the legal levels or the principles they rely on. I will provide this in section 5. Before doing so, I clarify how the tax jurisdictions are classified into four ideal types.

Tax jurisdictions are compared and ranked regarding the degree in which they allow for tax incentives on cross-border donations. This results in four ideal types: (1) closed jurisdictions; (2) restrictive jurisdictions; (3) relatively open jurisdictions and (4) open jurisdictions. Countries without a tax incentive in place at the domestic level fall outside the comparison. The categorization of the jurisdictions into ideal types is done as systematically as possible, in order to increase the internal validity. The following steps are taken:

- (1) Does the domestic tax legislation allow for tax incentives on direct cross-border donations to twenty countries and more? If yes, ideal type (4) open jurisdiction.
- (2) Does the domestic tax legislation allow for tax incentives on indirect cross-border donations (through a local intermediary charity) and/or does the country have international agreements, such as tax treaties and/or supranational agreements, that allow for tax incentive on cross-border donations:
 - (a) with at least ten countries? and;
 - (b) of which the facts and circumstances make it practically possible to obtain a tax benefit on a cross-border situation? If yes, ideal type (3) relatively open jurisdictions.
- (3) Does the country have international agreements, but with less than ten countries and/or are the facts and circumstances such that it is impossible to obtain a tax benefit for a cross-border donation in practice? If yes, ideal type (2) restrictive jurisdiction.
- (4) None of the above? If yes, ideal type (1) closed jurisdictions.

⁵⁰ S.J.C. Hemels, *Are We in Need of a European Charity? How to Remove Fiscal Barriers to Cross-Border Charitable Giving in Europe*, Intertax 424–434 (2009).

Domestic tax legislation, bilateral tax treaties and supranational agreements are the main sources of data collection. In addition, important case law is studied with a focus on case law of courts at the international level such as the ECJ. To gain insight in the application of domestic tax law, initially the original documents are consulted. When this is not possible due to language barriers, this is notified explicitly. Even though translations of the language are available caution is required since certain concepts are difficult to translate or their meaning is influenced by the socio-cultural context. The Tax Research Platform of IBFD is used in case language barriers prevent consultation of original legislation.⁵¹ Furthermore, secondary sources are consulted, such as country reports gathered by several organizations. The European Foundation Centre and Transnational Giving Europe provide legal and fiscal country profiles for EU Member States, Albania, Liechtenstein, Norway, Switzerland, Turkey and Ukraine, focusing on the relevant features for charity organizations.⁵² The Council on Foundations and the publication following the 2012 Conference of European Tax Law Professors (EATLP) also provides national reports concerning the tax treatment of charities.⁵³

5 IDEAL TYPES

The four ideal types I propose are laid out in this section. I describe the common characteristics of each ideal type. After that, each ideal type is exemplified with country examples.

5.1 Closed Jurisdictions

Countries that stimulate charitable gifts through tax incentives in the domestic situation, but not in a cross-border situation are considered closed tax jurisdictions. In their tax system, these countries provide a benefit to benefactors of charity organizations, for example through a tax credit or deduction from taxable income. Closed jurisdictions, however, do not have domestic legislation that allows for a tax benefit for cross-border donations nor bilateral or supranational agreements with other countries

on tax incentives for cross-border donations. Examples of these countries are Australia and Japan. Countries that use a tax designation scheme (also known as percentage schemes) typically also belong to this ideal type, since the charities included in these schemes are usually solely domestic charities. Jurisdictions that use a tax designation scheme, however, are not closed jurisdictions per definition. It depends on the way in which the specific jurisdiction adopted the tax designation scheme. Hungary is one of the countries in the EU that uses a tax designation scheme.

5.1.1 Australia

In Australia gifts by individuals to specific recipient organizations are deductible from taxable income.⁵⁴ Organizations that are eligible to receive tax deductible gifts have to qualify as 'Deductible Gift Recipient' (DGR). In the Income Tax Assessment Act 1997 the requirements for these organizations are specified.⁵⁵ One of the requirements is that the organization must be in Australia. This is a strict requirement, entailing that the organization must be established and operated in Australia as well as have their purposes and beneficiaries in Australia.⁵⁶ Due to this condition, donations to organizations in other countries are not tax deductible in Australia based on domestic tax legislation.

The only organizations that are allowed to have their purposes and beneficiaries outside Australia are overseas aid funds, developed country disaster relief funds, DGRs listed by name in the income tax law if the government of the day (when they were listed) approved overseas purposes or beneficiaries and public funds on the Register of Environmental Organisations. Still, these organizations must be established and operated in Australia.⁵⁷ This does allow a little room to contribute to a cause abroad with the benefit of a tax incentive, however, the gift will not benefit a foreign organization, since the DGR must provide the services.⁵⁸ Therefore, an Australian DGR cannot function as a local intermediary charity to make a cross-border donation. Stewart points to anecdotal historical evidence that an Australian Trust, recognized as a DGR, may have been used as a local intermediary

⁵⁸ Australian Taxation Office – Tax Ruling TR 2003/5 at para. 131.

organization.⁵⁹ The donors, however, could not have bind the Trust to contribute their gift to a particular foreign organization, since this would have undermined the tax deductibility of the gift. In the domestic tax legislation, there is thus next to no room to obtain a tax incentive when contributing to a foreign charity.

Besides, Australia has not concluded bilateral tax treaties that allow for tax incentives on cross-border donations.⁶⁰ It is neither part of a supranational agreement on this issue. Therefore, Australia qualifies as a closed tax jurisdiction.

5.1.2 Japan⁶¹

Japanese taxpayers can benefit from a tax incentive when they contribute to a Japanese charity. They can chose between deducting the donation from taxable income or a tax credit of 40% of the amount donated.⁶² The receiving charity needs to have a specific authorization from the National Tax Administration, for the tax incentive to apply. The Japanese charity can receive this authorization if it is a Public Interest Corporation, an organization eligible for 'Designated Contributions' or a Special Non-profit Corporation.⁶³ An overview with requirements that charities have to meet to receive authorization from the National Tax Administration is not available. However, foreign charity organizations have not received this authorization and from that I derive that tax incentives do not apply for cross-border donations. Eligible Japanese charities can contribute to charitable causes abroad, however, they have to be in line with the Japanese charity's aims and meet certain strict requirements, as I interpret from the website of a Japanese charity active abroad.⁶⁴ The

Japanese tax legislation thus also leaves next to no room for tax incentives for cross-border donations.

Furthermore, Japan has not concluded bilateral tax treaties that allow for tax incentives on cross-border donations.⁶⁵ Nor is Japan part of a supranational agreement on this issue. Therefore, Japan is characterized as a closed country when it comes to the applicability of tax incentives for cross-border charitable donations.

5.1.3 Hungary⁶⁶

Residents of Hungary who pay income tax in Hungary are entitled to designate 1% of their income tax to specific charitable organizations.⁶⁷ The charity organizations qualifying for the tax designation scheme have to be registered in Hungary and have to pursue a public benefit activity.⁶⁸ This public benefit activity has to help accomplish a state or municipal task defined within a law directly or indirectly. Therefore, the public benefit activity has to refer to a suitable law.⁶⁹

Although Hungary is an EU Member State, it avoids granting tax incentives on cross-border donations to charities in other EU Member States through its tax designation scheme. Before 1 January 2011, a tax base deduction applied in Hungary. Individual donors could receive a tax credit of 30% of the value of their donation, with an additional 5% credit on regular donations.⁷⁰ The Hungarian government abandoned this incentive for individuals, possibly to avoid an infringement procedure of the European Commission. By doing so, they make it impossible to stimulate a foreign charity through the tax system. Furthermore, Hungary has not concluded bilateral tax treaties that allow for tax incentives on cross-border donations.⁷¹

Notes

⁵⁹ M. Stewart, *Tax Deductibility of Cross-Border Giving: Australia Gives no Quarter*, Melb. Leg. Stud. Res. Paper 605 (2012).

⁶⁰ All bilateral tax treaties of Australia that were in force on 8 Jun. 2015 were consulted on IBFD.org. The search term 'charit' was used to track potential provisions on charitable donations.

⁶¹ For Japan original legislation could not be consulted because of language barriers. Instead, the country details are based on the Country Information as provided by the Council on Foundations on the website of the United States International Grantmaking and the fiscal information provided by the IBFD Research Platform. Furthermore, secondary literature was consulted and Professor Kazuko Goto was consulted on 17 Jun. 2015.

⁷¹ All bilateral tax treaties of Hungary that were in force on 5 Jun. 2015 were consulted on IBFD.org. The search term 'charit' was used to track potential provisions on charitable donations.

5.2 Restrictive Jurisdictions

In restrictive jurisdictions a tax incentive can be obtained for cross-border donations, based on bilateral tax treaties or supranational agreements. However, the range of countries with which these agreements exist are limited. I draw a boundary at a range of agreements with ten countries.

Furthermore, countries with more agreements, but where it is practically cumbersome to receive a tax benefit, are included in this ideal type. I add this criterion to avoid that those countries where it is legally possible – but practically close to impossible – to receive a tax benefit on a cross-border donation, to end up in the relatively open category. For example, EU Member States need to allow for tax incentives in cross-border situations. However, in practice it proves to be extremely difficult in some Member States to obtain this benefit, since EU law based on the TFEU and ECJ case law is simply not applied. A local intermediary organization might provide a solution in this type of jurisdictions to obtain a tax incentive for cross-border donations. These jurisdictions try to restrict the tax incentives to the domestic situation as much as possible and are therefore effectively in the category ‘restrictive jurisdictions’.

5.2.1 United Kingdom

Donations by individuals can benefit from ‘Gift Aid’ in the United Kingdom (UK). This entails that donations are deemed to be made under the deduction of basic rate tax, which the charity or Community Amateur Sports Club (CASC) then can reclaim from the UK tax authorities: Her Majesty’s Revenue and Customs (HMRC).⁷² For Gift Aid to apply, the receiving organization needs to be recognized by the HMRC as a charity or a CASC. Charities must be registered with the Charity Commission for England & Wales, or the Office of the Scottish Charity Regulator or be exempted from registration duty but recognized by HMRC as a charity. To qualify as a charity, the organization must pursue a charitable purpose as specified

in the legislation.⁷³ CASCs are amateur sports clubs that are open to all, irrespective of ability.⁷⁴

With effect of 1 April 2010, for Gift Aid the law relating to charity exemption and the definition of ‘charity’ was extended to include charities established in the EU and other EEA countries,⁷⁵ since the UK, as an EU Member State, may not discriminate comparable charitable organizations in other EU Member States.⁷⁶ In practice, however, it is still difficult for foreign organizations to obtain the charity status. The HMRC decides on a case-by-case basis whether foreign organizations meet the UK charity requirements. The foreign organization must prove that it would qualify as a charity if it were established in the UK. Furthermore, it must prove that it is managed by fit and proper persons.⁷⁷ By December 2013, 103 foreign organizations had applied to qualify as a charity in the UK. Only nine were accepted. Most organizations were rejected because they did not meet the requirements for charities under UK law.⁷⁸ The UK has not concluded any bilateral tax treaties that include a provision on the mutual application of tax incentives to charitable donations.⁷⁹ Since it is practically cumbersome to register as a charity in the UK and the UK did not conclude bilateral tax treaties in which a provision on charitable contributions is included, the country is classified as a restrictive jurisdiction.

5.2.2 France

Individual donors can get a tax credit for donations to qualifying PBOs, which are organizations with a general interest status and organizations with a public benefit status.⁸⁰ To obtain this status, organizations must adopt statutes that comply with the model statutes set out by the Council of State and satisfy requirements regarding the financial viability and size of the organization, next to engaging primarily in general interest activities.⁸¹ French PBOs can spend their funds abroad, and thus they can function as local intermediary charities for cross-border donations. France has not concluded bilateral tax treaties that allow for tax incentives on cross-border donations.⁸²

Donations to PBOs in EU or EEA Member States can also benefit from the available tax credit if several requirements are met. For the tax credit to apply the foreign PBO, first of all, has to be established in a country which signed a Convention on Mutual Administrative Assistance in Tax Matters with France that includes a clause for assistance against tax fraud or evasion. Second, it has to meet the French requirements for qualifying PBOs. For some time it was unclear when a foreign organization meets the French requirements.⁸³ However, in a case on a British charitable trust the *Conseil d'État* decided that the French law shall be applied with some flexibility.⁸⁴ In the case concerned, the governors of the British charitable trust received a remuneration for their work that exceeded the remuneration set by the French tax authorities. The *Conseil d'État* considered the remuneration of the governors of the British charitable trust justifiable, though, as under British law they are subject to larger liabilities. In its judgment the *Conseil d'État* explicitly states that the applicable legislation in the resident country of the PBO should be taken into account when deciding whether the foreign organization meets the requirements for French PBOs.⁸⁵ Third, the foreign organization has to obtain a special status from the French tax authorities.⁸⁶ This status has a limited validity of three years, after which the organization has to apply again. In practice it shows to be rather cumbersome to obtain this agreement. Besides, the temporality of this status is an obstacle.

Alternatively to this status, the donor has to provide evidence that the organization meets the requirements for French tax exempt organizations, except for the residence requirement. This might seem more favourable than it is in reality. For all donations to foreign charity organizations that do not have the status from the French tax authorities separate evidence has to be delivered to the French tax authority in the region where the donor is registered. The burden of proof is on the donor. For each single donation evidence has to be provided that the foreign charity is comparable to a French charity and a new decision is made

by the relevant local tax authority. No repository is kept of previous decisions.⁸⁷ Although the case at the *Conseil d'État* on the British charitable trust help clarify under which circumstances foreign charitable organizations meet the French PBO requirements, it is still uncertain whether this course will be continued. Furthermore, it remains practically difficult to obtain a tax incentive for a cross-border donation. France is, therefore, classified as a restrictive jurisdiction.

5.2.3 Spain⁸⁸

In Spain donors can receive a tax credit for donations to qualifying organizations.⁸⁹ Donations can be made in cash and in kind.⁹⁰ Transnational Giving Europe has Spanish partners, from which I derive that Spanish charities are allowed to act as local intermediary charities.⁹¹

Donors can only receive a tax credit for donations to foreign organizations when a delegation of that organization is registered with the Spanish Register of Foundations and carries out its activities in Spain. To be included in the register, the PBO must meet all the requirements under Law 49/2002 and the deed of incorporation of the foundation must be translated into Spanish.⁹²

Although Spain is an EU Member State, it does try to restrict the application of tax incentives to charitable donations to the own country, by requiring charities resident in other EU Member States to have a branch in Spain and to carry out its activities in Spain. Spanish donors to non-profit entities located in other EU Member States or EEA Member States without a branch in Spain do not get the same tax incentives as Spanish donors contributing to Spanish charities. This is considered discriminatory by the European Commission and is not in line with the free movement of capital. Therefore, the European Commission started an infringement procedure, requesting Spain to amend its legislation.⁹³ Besides, Spain has not concluded any bilateral tax treaties that include a

provision on charitable contributions.⁹⁴ Therefore, Spain is a restrictive jurisdiction.

5.2.4 United States

In the US donations can be deducted from federal income tax when made to a qualifying organization. The deductions allowed and their conditions and limitations are described in detail in the Internal Revenue Code (IRC).⁹⁵ Qualifying organizations must be organized and operated for exempt purposes, which are described in the IRC under section 501(c)(3). Therefore, these organizations are also referred to as U.S. 501(c)(3) organizations.

To qualify as a 501(c)(3) organization, the charity has to be created in or under the laws of the US, any state, the District of Columbia or any possession of the US (including Puerto Rico). This puts high territorial restrictions on the qualifying organizations, excluding all organizations that are not established under the laws of the US. This makes the US restrictive towards tax incentives for cross-border donations. It does not, however, restrict qualifying organizations to spend their assets within the US. This creates room for US charities to engage in activities abroad, to function as local intermediary charities and for foreign charities to engage in the American fundraising market, by establishing themselves under US law. This can be done by establishing a 'friends of' organization in the US. This organization is set up under the laws of the US to raise funds in the US for a specific foreign charitable organization. Donors that wish to contribute to a charity abroad can also establish a donor-advised fund under a U.S. 501(c)(3) organization. The U.S. 501(c)(3) organization owns, controls and administers the funds, but the donor can make recommendations on the spending of the funds.⁹⁶

The only charities established under foreign law that can receive tax deductible gifts are those created under Israeli, Mexican or Canadian law. This is due to the income tax treaties that the US holds with these countries.⁹⁷ For the gift of a US taxpayer to an Israeli, Mexican or Canadian charity to be deductible, the charity must be tax exempt in its country of residence and should meet the US requirements for qualifying organizations were it established in the US. Furthermore and foremost,

the donation is only deductible from the source income generated by the US taxpayer in the country where the charity is resident. The donations are only deductible from that source income for a maximum amount that can be determined by applying the US percentage limitations.⁹⁸

5.3 Relatively Open Jurisdictions

A more moderate category are the relatively open tax jurisdictions, that do allow for tax incentives on cross-border donations, but mainly based on tax treaties, supranational agreements and through local intermediary charities. I draw a boundary at the amount ten or more countries with which the country has agreed to allow for tax incentives on cross-border donations. Furthermore, the facts and circumstances make it practically feasible to obtain a tax benefit on a cross-border donation.

5.3.1 Belgium

In Belgium a tax credit applies to donations to qualifying charities. Gifts to organizations that allow for a tax credit are organizations that are either explicitly approved by law, recognized by the Ministry of Finance or received recognition by Royal Decree. Universities, academic hospitals, the Royal Academies, the Red Cross of Belgium or departments of the Red Cross in other EEA Member States, the King Baudouin Foundation, the Palace of Fine Arts and the Royal Theatre 'La Monnaie / De Munt' are, amongst others, explicitly included as charitable organizations by law. Belgian qualifying charities can be used as local intermediary charities.

Cash gifts to qualifying organizations are rewarded with a tax credit in Belgium. This also applies to donations to associations or institutions in other EEA Member States as long as the donor can provide proof that the association or institution qualifies as an equivalent of a Belgian qualifying charity and has been recognized in a similar manner by the other Member State. This entails that the charity in the EEA Member State needs to meet both requirements in the home country and the host country.⁹⁹ The tax credit also applies to in kind donations that belong to the movable heritage of Belgium or are of international fame according to the Ministry of Finance.

Notes

⁹⁸ Canada – United States Income and Capital Tax Treaty (1980 as amended through 2007), Israel – United States Income Tax Treaty (1975) and Mexico – United States Income Tax Treaty (1992 as amended through 2002).

⁹⁹ Article 145/33 §2 Wetboek van Inkomstenbelastingen 92.

Furthermore, the beneficiary of the donated work has to be a National Museum or Communities and Regions, a province, a municipality or a public centre for social welfare, under the condition that these public powers designate the work of art to their museum.¹⁰⁰ This measure does not apply to donations to National Museums in other countries.¹⁰¹ Belgium has not concluded bilateral tax treaties that allow for tax incentives on cross-border donations.¹⁰² But since cash donations to charities in other EEA Member States are rewarded with a tax incentive, Belgium is an example of a relatively open jurisdiction.

5.3.2 Germany

In Germany a deduction from taxable income applies for donations and contributions to PBOs.¹⁰³ Both cash and in kind donations qualify for tax deductibility. For the tax deduction to apply, the receiving organization has to be recognized by the German tax authority as a PBO. This is done whenever the organization pursues a public-benefit purpose, a charitable purpose or a religious purpose, which is included in the German Fiscal Code. The activities of an organization that serves a public benefit purpose are dedicated to the altruistic advancement of the general public in a material, spiritual or moral sense.¹⁰⁴ The qualifying organization has to issue a donation certificate to the donor so that he can present it to the tax authorities to obtain the deduction. Since German PBOs can spend their assets abroad, German PBOs can serve as local intermediary charities, through which German taxpayers can make a gift to a foreign charity with the benefit of a tax incentive.

When direct donations are made to charities established in other EU or EEA Member States, these are also deductible, as is required of EU Member States. One of the requirements to be recognized by the German tax authorities as a qualifying PBO is that the foreign PBOs activities are deemed able to contribute to the Federal Republic of Germany's international reputation.¹⁰⁵ They could fulfil this requirement by (partially) conducting their tax privileged activities in Germany. In case the

foreign PBO solely conducts its activities outside of Germany, the requirement can be met by promoting persons who live in Germany and are abroad to carry out tax privileged activities.¹⁰⁶ The indicative effect –where the German tax authorities assume that German PBOs that conduct tax privileged activities abroad contributes to the international reputation of the Federal Republic of Germany – is not applicable to foreign PBOs.¹⁰⁷ In practice, however, the German tax authorities have not applied this requirement to limit the scope of the tax deduction, thus allowing German tax payers to deduct their donations to foreign PBOs, notwithstanding the donation contributing to the Federal Republic of Germany's international reputation.

For a German taxpayer to be able to benefit from the tax deduction when a donation is made to a foreign PBO, the PBO has to be established in another EU or EEA Member State and the other state has to apply the Council Directive 77/779/EEC of 19 December 1977 as well as Council Directive 2008/55/EC of 16 May 2008. Furthermore, the donor needs to provide the German tax authorities with all the necessary proof that the foreign PBO meets the requirements for qualifying PBOs. The requirements for this proof were rather strict, but in a recently published judgment¹⁰⁸ of the German Federal Fiscal Court these requirements were loosened, making it easier to obtain a tax incentive for a cross-border donation.

Germany has not concluded any bilateral tax treaties that include a provision on the mutual application of tax incentives for charitable donations.¹⁰⁹ Still, it is practically feasible for German taxpayers to obtain a tax benefit for cross-border gifts to ten or more countries. Germany is therefore classified as a relatively open jurisdiction.

Finally, a remark concerning the German *Kirchensteuer*¹¹⁰ (church tax) is necessary. The *Kirchensteuer*, where the German tax authority gathers taxes for churches, is an example of a tax designation scheme. This section of the German tax jurisdiction therefore belongs to the closed jurisdictions. However, since this only applies to churches and not to charities in general, it is not determinative for the categorization of the German jurisdiction as a whole.

5.4 Open Jurisdictions

Open tax jurisdictions are those countries that allow for tax incentives on cross-border donations, based on domestic tax regulations. They do so in cross-border situations with multiple countries. I set the boundary at twenty countries and more. Regardless whether donations are made domestically or internationally, tax privileges can be obtained. Thus, there is no discrimination between donations made to domestic charities and foreign charities. In both cases the donor receives the same tax privilege.

5.4.1 The Netherlands

The Netherlands does not put a geographical restriction on the tax benefits for gifts. Dutch taxpayers can deduct their gift, whether it is a domestic gift or a cross-border gift, from personal income tax when certain requirements are met. For the gift to be tax deductible, the charity organization has to qualify as a 'Public Benefit Pursuing Entity' (PBE) and be registered as such at the Dutch tax authorities. The Netherlands thus uses host country control. This holds for both domestic and foreign charities. Resident charities of the Kingdom of the Netherlands, another EU Member State or a state designated by the Ministry of Finance all have to meet the same requirements. To obtain the PBE status an organization needs to meet certain requirements, of which the most important requirement is that the organization pursues the public benefit exclusively or almost exclusively (at least 90%).¹¹¹

By consulting the PBE register at the Dutch tax authorities the donor can see which arts organizations qualify to receive tax deductible gifts. In addition to the PBE status that can be obtained by foreign charity organizations, Dutch PBEs can also function as a local intermediary charity to make a cross-border contribution. Yet, in December 2014 the Ministry of Finance in a decree took the stance that a PBEs should not function as a conduit organization.¹¹² The operating range of this decree, however, is not yet clear.

The Netherlands concluded one tax treaty with a provision on charitable contributions. It is the tax treaty with Barbados.¹¹³ In the next section, on Barbados, this provision is explained in further detail.

5.4.2 Barbados

In Barbados donations to registered charities are deductible from taxable income.¹¹⁴ To register as a charity, the organization has to be established for charitable objects and purposes and operate for the public benefit.¹¹⁵ The Charities Act does not require charities to be established in Barbados and therefore also foreign charities can register as a charity in Barbados.

In Barbados' bilateral tax treaties with Mauritius, Mexico, the Netherlands, the Seychelles and Ghana (not yet in force), a provision is included on charitable contributions.¹¹⁶ The relevant article reads:

Donations to charitable institutions.

1. *In the computation of the tax liability of a resident of a Contracting State for any taxable year under the income tax laws of that State, there shall be allowed as a deduction, subject to any conditions provided under the income tax laws of that State, donations to any organisation qualifying as a charitable institution under the income tax laws of the other Contracting State.*
2. *The competent authority of a Contracting State may consult the other Contracting State to determine whether an organisation qualifies as a charitable institution under the laws of that other State.*

Barbados thus applies a tax deduction for charitable contributions to charities in the other Contracting State and vice versa, wherein the Contracting States may agree on the organizations' qualification as charitable institution. Thus, both home- and host- country control apply. This provision was included in the bilateral tax treaty between Barbados and the Netherlands on the request of Barbados.¹¹⁷ Presumably it was also on the request of Barbados that this provision was included in the treaties with the other countries.

5.4.3 Sweden¹¹⁸

Sweden is an open country when it comes to the tax credit that donors can receive when making a gift to charity organizations.¹¹⁹ For the tax credit to apply, the recipient organization has to be recognized by the Swedish Tax Agency as an organization that shall enjoy income tax relief. Charity organizations can apply for this status by filling out a form and providing the Swedish Tax Agency with the required documents. Furthermore, the foreign charity organization needs to meet the requirements for restricted tax liability. Finally, the charity organization needs to have at least one certified accountant. There are two charitable activities designated that enjoy income tax relief, namely charitable activities for poor and needy and the promotion of scientific research.

Donors to foreign equivalents of qualifying Swedish organizations, located in the EEA or countries with which Sweden has a tax treaty in which an article on information exchange in tax matters is included, may also enjoy the tax credit.¹²⁰ The foreign charity organizations also have to apply at the Swedish Tax Agency to become recognized as an organization that shall enjoy income tax relief. The information does not need to be translated into Swedish, but can be provided in English.¹²¹

Sweden has not concluded bilateral tax treaties that allow for tax incentives on cross-border donations.¹²² But since it allows for a tax deduction on cross-border donations to more than twenty countries, based on domestic tax legislation, it qualifies as an open jurisdiction.

6 CONCLUDING REMARKS

Countries have different approaches towards the application of tax incentives to cross-border philanthropy. Some countries, such as the Netherlands, are very open, providing the same tax incentives on charitable gifts that

go abroad. Other countries, such as Australia and Japan, are closed and a tax incentive only applies if the majority of the donation is spent within the country. A wide variety of tax policies exist between these two extremes. I classified the different approaches into four ideal types, ranging from closed jurisdictions, restrictive jurisdictions, relatively open jurisdictions to open jurisdictions.

The main reason why countries restrict tax incentives for charitable donations to the domestic situation is because there is not enough national benefit of cross-border donations to justify the drainage of tax revenue. Additionally, countries often do not hold the same definition of what activities should be granted a tax incentive. Their definition of public benefit differs. On the contrary, there is also a lot of overlap in the definition of public benefit. This overlap, as well as activities that contribute to the global welfare can be an inducement to apply tax incentives for cross-border donations. Besides, countries might want to apply tax incentives for donations that go to countries with which they want to strengthen their ties. Balancing these arguments to decide whether or not to apply tax incentives for cross-border donations is a matter of politics. The different political opinions result in a broad range of approaches towards the application of tax incentives to cross-border donations.

The categorization of countries into ideal types I suggested in this article gives an overview and structures the broad range of approaches. Determining the position of one's own tax jurisdiction in the broad range of tax jurisdictions becomes straightforward with this categorization. By doing so, the use of the categorization goes beyond the country examples given in this article. Furthermore, the ideal types contribute to the comparability of countries concerning the application of tax incentives to cross-border philanthropy. In future research on this topic the ideal types can be useful to find measures to apply tax incentives for cross-border donations per ideal type.
