

## Table of contents

<b>Chapter I</b>	
<b>General Introduction</b>	5
1.1. History of cytogenetics	6
1.2 Cytogenetics of leukemia	8
1.3 New cytogenetic techniques	12
1.4 Minimal residual disease (MRD)	22
1.5 The scope of the thesis and organization of the chapters	24
<b>Chapter II</b>	
<b>Materials, methods and technical developments</b>	27
2.1 Chromosome studies by flow karyotyping	28
2.2 On the presence of separate chromatids in chromosome suspensions	40
2.3 Interphase cytogenetics with fluorescence in situ hybridization	46
<b>Chapter III</b>	
<b>Bivariate flow karyotyping of acute myelocytic leukemia in the BNML rat model</b>	49
<b>Chapter IV</b>	
<b>Bivariate flow karyotyping in human Philadelphia-positive chronic myelocytic leukemia</b>	63
<b>Chapter V</b>	
<b>Clinical applications of flow karyotyping in myelocytic leukemia by stimulation of different subpopulations of cells in blood and bone marrow samples</b>	75
<b>Chapter VI</b>	
<b>Follow-up study of leukemia patients after chemotherapy or sex-mismatched bone marrow transplantation using fluorescence in situ hybridization with chromosome specific repetitive DNA probes</b>	87
<b>Chapter VII</b>	
<b>Hybridization of nuclei in suspension with chromosome specific DNA probes for the application of flow cytometric detection of chimerism in sex-mismatched bone marrow transplanted patients and for the detection of leukemia after sorting</b>	103
<b>Chapter VIII</b>	
<b>Summary and discussion</b>	117
<b>Samenvatting en discussie</b>	124
<b>List of frequently used abbreviations</b>	141
