

Stellingen:

1. The quality of cost-effectiveness studies should be improved, particularly in the field of psychology (This thesis)
2. To evaluate whether the decision tool for patients with severe and complex personality disorders is cost-effective more long term effect studies are needed (This thesis)
3. Outcomes of cost utility analysis for mental disorders from a healthcare perspective can deviate largely from outcomes from a societal perspective (This thesis)
4. In cost-effectiveness studies, productivity costs should always be taken into account as they have a large impact on the outcomes of treatments of patients with psychological disorders (This thesis)
5. This thesis provides indications of the surplus value of incorporating increased collaboration in interventions, however, in light of the limited evidence, replications of these studies are necessary (This thesis)
6. The best collaborations create something bigger than the sum of what each person can create on their own
7. Economic consideration for reimbursement of psychological treatment are often claimed to be heartless, however, clinicians should be aware that money **not** spent on one single patient can be used to save many others
8. Psychology has a long past, but only a short history (Herman Ebbinghaus)
9. An ounce of prevention is worth a pound of cure (Benjamin Franklin)
10. The quality of life is more important than life itself (Alexis Carrel)
11. All generalizations are false, including this one (Mark twain)
