

Circulating biomarkers in cancer progression and treatment

1. Cancer cell subpopulations can alter each other's drug responses. *(This thesis)*
2. Crosstalk between tumor stroma and cancer cell subpopulations from the same tumor is heterogeneous. *(This thesis)*
3. Cancer is a dynamic disease, thus repeated circulating nucleic acid analyses are essential for clinical follow up. *(This thesis)*
4. Circulating tumor DNA mutations reveal the genomic landscape of cancer. *(This thesis)*
5. Circulating microRNAs reflect the host's response to cancer and cancer therapy. *(This thesis)*
6. The vermiform appendix is a promising source of pancreatic cancer reactive lymphocytes. *(This thesis)*
7. It is not the strongest of the species, or the most intelligent that survive. It is the one that is the most adaptable to change. *(Charles Robert Darwin)*
8. Man need difficulties, they are necessary for health. *(Carl Gustav Jung)*
9. Not a single person on the face of the earth knows how to make a pencil. *(Leonard Edward Read)*
10. Beweging is het enige onveranderlijke dat er bestaat. *(Jules Anton Deelder)*
11. Advances of human reason consist in finding out where it has been wrong. *(Friedrich August von Hayek)*
