

1. Defocusing makes it both possible *and* more difficult to track fast moving bubbles – *This Thesis*
2. Bubbles are needed to track fast blood flow in deep places – *This Thesis*
3. Higher framerate necessitates gentler imaging to prevent bubble destruction – *This Thesis*
4. Bubbles do not stop and wait while you take a picture – *This Thesis*
5. The spatiotemporal behavior of moving bubbles is more useful for clutter filtering than their frequency response. – *This Thesis*
6. Failure is a better teacher than success
7. We live in a 4D world, but see in 2D – our interaction with the world reveals the rest
8. A PhD student is the gold standard in data compression
9. It takes many scientists to change a lightbulb
10. There is no harder deadline for your thesis than a baby on the way
11. You know you complain too much when the Dutch complain about your complaining
