General Psychopathology in Children

Epidemiological Studies of Biological Mechanisms
General Psychopathology in Children
Epidemiological Studies of Biological Mechanisms

Thesis
to obtain the degree of Doctor from the
Erasmus University Rotterdam
by command of the
Rector Magnificus
Prof. Dr. R.C.M.E. Engels

and in accordance with the decision of the Doctorate Board
The public defense shall be held on Wednesday 21 June 2019 at 9:30

by
Alexander Neumann
born in Berlin, Germany
Doctoral Committee

Promotors:
- Prof. Dr. H. Tiemeier
- Prof. Dr. M. van IJzendoorn
- Prof. Dr. M. Bakermans-Kranenburg

Other members:
- Dr. F. Rivadeneira
- Prof. Dr. B. Lahey
- Prof. Dr. J. Ormel

Paranimfen:
- Charlotte Cecil
- Andrea Cortes Hidalgo
MANUSCRIPTS THAT FORM THE BASIS OF THIS THESIS

# TABLE OF CONTENTS

I. Stellingen

II. General Introduction

III. Predictors, causes and outcomes of general and specific psychopathology

A. Parental age and offspring childhood mental health: a multi-cohort, population-based Investigation

B. The general psychopathology factor: An examination of the structure of child psychopathology across multiple cohorts

C. Single nucleotide polymorphism heritability of a general psychopathology factor in children

D. A genome-wide association study of total child psychiatric problems scores

E. White matter microstructure and the general psychopathology factor in children

IV. ADHD symptoms and DNA methylation at birth and school-age

V. Cortisol Genetics

A. Predicting hair cortisol levels with hair pigmentation genes: a possible hair

B. The low single nucleotide polymorphism heritability of plasma and saliva cortisol levels

VI. General Discussion

VII. Summary/Samenvatting

VIII. Appendix
