February, 2000

Revised August, 2000

**NOT FOR PUBLICATION**

This companion paper to “On the empirical distribution of the Balassa Index” contains tables with more detailed analysis of the empirical properties of the Balassa Index. For an explanation of these tables we refer the reader to the paper.

<sup>a</sup> 01 92 - 12 92 indicates the year from January 1992 through December 1992, etc.; p-z reports the Balassa index for the z-th percentile, for z = 1, 2.5, 5, 10, 25, 50, 75, 90, 95, 97.5, and 99; max = maximum; std = standard deviation; obs = number of observations; BI-γ reports the share of industries with a Balassa index lower than γ, for γ = 1, 2, 4, 8.

**Table A6 Empirical transition probability matrices for values of the Balassa index based on monthly export flows; EU countries grouped together.<sup>a</sup>**

<sup>a</sup> The table is based on monthly moving annual export flows for January 1992 through December 1996. Cell entries are rounded such that the rows of each matrix add up to one. The first number (top-left) in each transition matrix is the number of Balassa indices the matrix is based upon. Below the entries are the concomitant standard deviations.
