CONTENTS

Foreword		
Introl	DUCTION AND SUMMARY	>
CHAPT	ER 1 CHARACTERISTICS OF THE ELEMENT OF SPACE	1
	Categories of Space Units. Order of Subdivision	1
	Mobility of Factors Products and Consumers	4
	Shiftability of Activities (Differences in Production Costs)	6
	The Optimal Level of the Use of Means of Economic Policy	
	Space Economics of the First Order; without Prices	9
	Space Economics of the First Order; with Prices	1(
1.7.	Space Economics of Higher Order; without Prices	12
1.8.	Space Economics of Higher Order; with Prices	13
CHAPT	er 2 Development Planning without Space: A Summary	1 5
2.1.	Purpose of the Chapter	1.5
2.2.	The Macro Stage	16
2.3.	The Sector Stage: Demand and Costs	18
2.4.	Scarce Factors Different among Eras and Areas	2]
2.5.	The Project Stage: Bunches	23
2.6.	The Project Stage: Criterion and Prices	24
2.7.	The Time Horizon	26
CHAPT	ER 3 THE ELEMENT OF SPACE IN WORLD PLANNING; SECOND ORDER	
	SUBVIDISION OF A CLOSED ECONOMY; TRANSPORTATION COSTS	
	IMPLICIT	29
3.1.	Introductory; Objective of Chapter; Nature of Problem	29
3.2.	Summarizing the Assumptions and the Data of the Simplest Version	32
3.3.	Factors Determining Comparative Advantages	33
3.4.	Formulation of the Simplest Version as a Transportation or Hitch-cock Problem	36
3.5.	Solution of the Simplest Version with the Aid of the uv-Method	39
	Reducing the Volume of Work	43
	The Model with Pre-Determined Zero Activities	47
CHAPT	ER 4 THE ELEMENT OF SPACE IN NATIONAL DEVELOPMENT PLANNING; SECOND ORDER SUBDIVISION OF AN OPEN ECONOMY; TRANSPORTA-	<i>A</i> (
	TION COSTS IMPLICIT	45

VIII

	Choice of Regions and Their Frontiers	49	
.,	Choice of Sectors	51 52	
4.3.	Nature of the National Planning Problem with Regional Subdivision		
4.4.	Solution of the Simplest Version of the National Planning Problem	57	
	Normalized Form of Problem; Problem with Predetermined Zeros	61	
	Costs of Regional Policy	63	
	Introduction of Employment Targets	67	
	Introduction of Input-Output Relations	68	
	Decomposition of the National Planning Problem	73	
4.10.	The Estimation of Interregional Transport Flows	75	
4.11.	Introduction of Bounds for Some Variables	79	
4.12.	Integration of Countries into an Area	84	
4.13.	A Case Study: Mexico	85	
CHAPTI	ER 5 WORLD DEVELOPMENT PLANNING; SECOND ORDER SUBDIVISION		
	OF A CLOSED ECONOMY; EXPLICIT TRANSPORTATION COSTS FOR HEAVY		
	Products	89	
5.1.	Heavy Products	89	
5.2.	Models with Explicit Transportation Costs for Heavy Products; an		
	Example of a Model for a Closed Economy	91	
	A Numerical Example for a Closed Economy and its Solution	97	
5.4.	Comparison of the Simultaneous Solution with the Successive		
	Solution of the Numerical Example	107	
5.5.	Decomposition of the Model	113	
CHAPTE	ER 6 AN ITERATIVE IMPROVEMENT PROCEDURE; APPLICATION TO		
	World or National Development Planning; Second Order		
	SUBDIVISION OF A CLOSED OR OPEN ECONOMY; EXPLICIT TRANSPOR-		
	TATION COSTS FOR HEAVY PRODUCTS	117	
6.1.	The Iterative Improvement Method and its Application to a Closed		
67	Economy Model	117	
0.4.	A Simple Model of an Open Economy with a Heavy Sector and its Solution	133	
6.3.	The Introduction of Transport Costs Dependent on the Dominant		
	Flow along a Route	145	
CHAPTE	ER 7 A SURVEY OF THE MODELS, THEIR ASSUMPTIONS AND SOLUTION		
	METHODS	169	
7.1.	Introduction	169	
7.2.	The General Model	170	
7.3.	From the General Model to the Basic Model	180	
7.4.	Derivation of the Models of Chapters 3-6 from the Basic Model	192	
	Schematic Representation of the Assumptions and Models	207	

CONTENTS

CHAPTE	R 8 THE INTRODUCTION OF INDIVISIBILITIES; NO FULL SPECIFICATION	
	of Topography	211
8.1.	The Hierarchy Model; No Foreign Trade; Agriculture Evenly Spread	
<u>. </u>	over the Country; Vertical Integration	211
	Appropriate Choice of Groups of Industries	219
	The Hierarchy Model: Non-Shiftable Industries	225
	The Hierarchy Model: Foreign Trade	227
	Corrections for Industries with Heavy Agricultural Inputs	229
_	No Vertical Integration; Input-Output Relations	232
	Agglomeration Effects	235
_	Stepwise Spatial Planning	236
8.9.	An Empirical Investigation for the Netherlands	238
CHAPTE	243	
9.1.	Differences in Variability of the Elements Involved	243
9.2.	Optimal Location of a New Plant	245
9.3.	Growth of Existing Centres	245
9.4.	The Development of a New Region	247
9.5.	Small Additions to an Existing System of Centres	248
9.6.	Bigger Changes in a System of Centres	249
9.7.	Instruments for Spatial Planning	250
CHAPTER 10 PREPARATORY STUDIES; SOME COEFFICIENTS		253
10.1.	Spontaneous Migration	253
10.2.	Optimum Size of Production Units	255
	Local, Regional, National and International Industries;	^ CO
	A Ten-Country Study International Commonichility of Input Output Tables	258
	International Comparability of Input-Output Tables Conital Output Paties	261
IV.J.	Capital-Output Ratios	266
APPEND	x I The Characterization of Spatial Units	269
APPEND	ex II Data and Solutions of the Mexican Model	274
APPEND	IX III Mathematical Remarks on the Decomposition Procedures in the Chapters 4 and 6	280
APPEND	x IV Heavy Products	296
APPEND	x V Classification of Sectors	314
APPEND	x VI Cost Coefficients	318
