LIST OF TABLES

I A Summary of data. Absolute figures.
I B Calculation of consumption.
I C Calculation of investment.
I D Calculation of cost of living.
I E Balance of payments.
I F Calculation of non-workers' income.
I G Deviations from 9-year moving averages.
I H Nine-year averages for 1883 and 1894 for various variables.
I K Standard deviations for various variables.
II  3 Elasticities of employment with respect to output.
III 1, 0 "Explanations" of consumption outlay, provisional figures.
III 1 "Explanations" of consumption outlay, final figures.
III 150 Statistical material used in demand studies for separate commodities.
III 151 Some details on sugar, coffee, tea, spirits and cotton consumption.
III 2 "Explanations" of exports of consumers' goods.
III 4 "Explanations" of investment activity. Total and group figures.
III 4, 1 "Explanations" of investment activity for other countries.
IV 1 "Explanations" of fluctuations in wage rates.
IV 2 "Explanations" of fluctuations in cost of living.
IV 20 Summary of price indices calculated (consumers' goods).
IV 3 "Explanations" of fluctuations in export prices for consumers' goods.
IV 4 "Explanations" of fluctuations in investment good prices.
V  1 "Explanations" of demand for short claims by banks, in various ways.
V  4 "Explanations" of demand for cash by banks.
V  6 "Explanations" of short-term interest rates.
VII 1 Regression equations for period A (1870—1914), B (1870—1895) and C (1896—1914).
VIII 31 Summary of elementary equations describing business cycle mechanism.
VIII 32/3 The elimination process, I and II.

TABLES 1 A—I K

General observation. The statistical material upon which the correlation analysis given in this volume is based is presented in table I A. Tables I B—1 F give particulars about the method of calculation of some series for which somewhat complicated computations were made. Further particulars are given in chapter I. Table I G gives the deviations from trends used in the correlation calculations; table I H summarises some 9-year moving averages used in elasticity calculations, table I K standard deviations of the series of table I G.

The trend values of incomes (Z) and of production and consumption of consumers' goods (quantities as well as values, i.e. u, u' and U') are probably not correct: there is an inexplicable discrepancy between them, which could only be accepted if depreciation allowances had fallen between 1870 and 1900 in stead of risen. These trend figures should therefore not be taken as final.
