# Table of Contents

## Chapter 1 – Introduction
1.1 General Introduction .......................... 7
1.2 Cell Biology of Neurons ......................... 9
    1.2.1 Neuronal cultures as a model for how the brain works 10
    1.2.2 Development of neurons in culture 11
    1.2.3 Techniques – transfection, staining, and imaging of cultured neurons 12
1.3. Axon Growth, Guidance, and Targeting .......... 13
    1.3.1 Growth cones .......................... 14
    1.3.2 The cytoskeleton and axon growth ............ 14
    1.3.3 Directed axon growth and guidance cues .......... 15
1.4. Dendrite Development ......................... 16
    1.4.1 Dendritic growth and branching ............ 16
    1.4.2 Dendritic spines ........................ 17
1.5. Formation and Function of Synapses ............. 17
    1.5.1 Synaptic cell adhesion molecules ............ 17
    1.5.2 Synaptic scaffolding and signaling proteins .... 18
    1.5.3 Synaptic vesicles and receptors ............ 19
1.6. Maintenance and Plasticity of Synapses ........ 20
    1.6.1 Protein turnover ........................ 20
    1.6.2 Modification of synapses in response to activity .... 21
    1.6.3 Learning and memory .................... 21
1.7. Scope of the Thesis .......................... 22

## Chapter 2 - The Liprin-α Family of Proteins
2.1. The Liprin-α Family of Proteins ............... 23
2.2. Liprin-α and Presynaptic Development .......... 25
2.3. Liprin-α and Postsynaptic Development ......... 27
2.4. Liprin-α and Neurotransmitter Release ........ 27
2.5. Neuroanatomical Expression Patterns of Liprin-α Proteins 29
    2.5.1 Generation and specificity of anti-liprin antibodies .... 31
    2.5.2 Nervous system expression of liprin proteins .... 31

## Chapter 3 – LAR Controls Axon Growth and Branching via Interaction with Liprin-α and Cortactin
3.1. Introduction .................................. 35
3.2. Results ...................................... 37
    3.2.1 LAR-RPTP controls axon growth and branching .... 38
    3.2.2 The LAR intracellular domain is associated with liprin-α, p140Cap, and cortactin .... 39
    3.2.3 LAR and cortactin co-cluster independently of liprin-α in neurons .... 43
    3.2.4 Liprin-α2 and p140Cap are necessary for axon growth .... 44
    3.2.5 Cortactin is responsible for promoting axon branching .... 46
3.3. Discussion

3.3.1 LAR controls MT and axon growth via liprin-α2, p140Cap, and EB3

3.3.2 LAR inhibits axon branching through cortactin

Chapter 4 – Liprin-α1 Degradation by Calcium/Calmodulin-Dependent Protein Kinase II Regulates LAR Receptor Tyrosine Phosphatase Distribution and Dendrite Development

4.1. Introduction 51

4.2. Results

4.2.1 Downregulation of liprin-α in hippocampal neurons by CaMKII and proteasome-mediated degradation 55

4.2.2 RNAi knockdown of APC increases liprin-α 56

4.2.3 CaMKIIα/β knockdown by RNAi increases liprin-α in hippocampal neurons 58

4.2.4 Active CaMKII decreases liprin-α1 protein level in COS-7 cells 61

4.2.5 C-terminus and PEST motif are essential for CaMKII dependent liprin-α1 degradation 63

4.2.6 Proteasome is not involved in CaMKII dependent liprin-α1 degradation in COS-7 cells 68

4.2.7 Interaction of CaMKII and liprin-α1 in vitro and in vivo 68

4.2.8 Liprin-α1ΔPESTΔC and liprin-α1ΔPEST/S-A inhibit dendrite morphogenesis and reduce synapse density 71

4.2.9 LAR-liprin interfering constructs and LAR shRNA inhibit dendrite morphogenesis 72

4.2.10 Liprin-α1 increases surface expression and clustering of LAR receptors 75

4.2.11 CaMKII-non-degradable liprin-α1 mutants impair dendritic targeting of LAR 77

4.3. Discussion

4.3.1 Activity-dependent regulation of liprin-α1 by two mechanisms: CaMKII and proteasome 78

4.3.2 Importance of CaMKII degradation of liprin-α1 for dendrite morphogenesis 80

Chapter 5 – Regulation of Presynaptic Composition and Function by Distinct Liprin-α Family Proteins

5.1. Introduction 85

5.2. Results

5.2.1 Liprin-α2 is abundant at synapses in the hippocampus 86

5.2.2 Presynaptic localization of liprin-α2 does not depend on other scaffold proteins 87

5.2.3 Liprin-α1 and liprin-α2 differentially regulate presynaptic function 90
5.2.4 Liprin-α1 and liprin-α2 selectively interact with different presynaptic proteins

5.2.5 Liprin-α2 recruits CASK to presynaptic boutons

5.2.6 Liprin-α1 reduces bassoon and piccolo localization at presynaptic boutons

5.2.7 Liprin-α1 competes with bassoon for binding to presynaptic CAST

5.2.8 CAST is critical for bassoon localization at membrane structures

5.3. Discussion

5.3.1 Liprin-α2 is a molecular organizer of hippocampal presynapses

5.3.2 Liprin-α1 negatively regulates SV recycling

5.3.3 Liprin-α family proteins are not functionally redundant

Chapter 6 – Materials and Methods

Chapter 7 – Discussion

7.1 Liprin-α in Axon Growth, Guidance, and Targeting

7.2 Liprin-α in Dendrite Development

7.3 Liprin-α in Formation and Function of Synapses

7.4 Liprin-α in Maintenance and Plasticity of Synapses

7.5 Liprins in the Rest of the Brain – Future Directions
