*Our classification:* Current total social participation, code S8.2

*Measurement:* Degree of correspondence between orientation towards social participation and actual social participation mode.

1. Orientation towards social participation was measured by the adapted Dye (1963) Localism - Cosmopolitan Scale (see S 4.5, GRANE 1973A).
2. Actual social participation was measured by 9 social communications activities, which were arrayed according to their degree of 'cosmopolitan characteristics of the people who are (in)active in them: -'cosmopolitan' mode of social

participation defined as: visiting neighbours, friends and relatives and reading.

- 'intermediate' mode of social participation defined as: church attendance, television viewing, and number of memberships in voluntary associations.

- 'local' mode of social participation defined as: radio-listening, telephone use, and participation in voluntary associations.

## Correlate

**Authors label:** Satisfaction with social activities

**Our classification:** Satisfaction with social participation, code S8.3.2

**Measurement:** Self report on 2 questions:  
 A: How satisfied are you with your friends?  
 B: How satisfied are you with your social life?  
  
 Rated: 1= very dissatisfied to 5= very satisfied

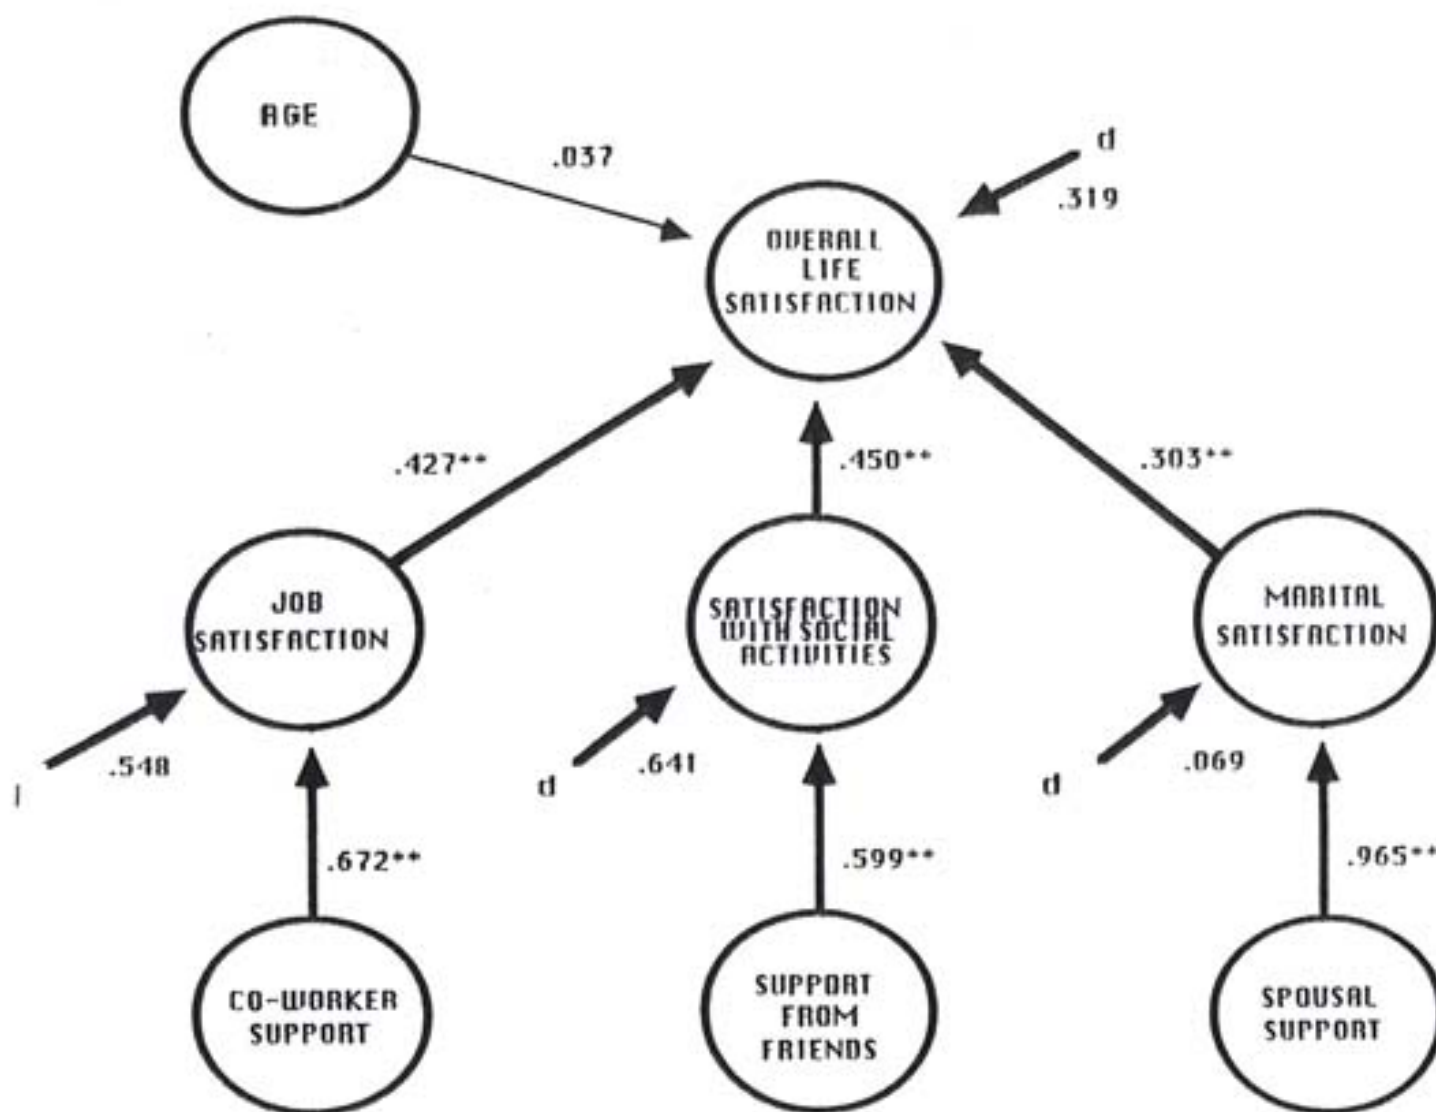

Measured Values: Mean 7,51 SD 1,93

Error Estimates: Coefficient alfa = .83

## Appendix 3: About the World Database of Happiness

### Structure of the collections

The World Database of Happiness is an ongoing register of scientific research on the subjective enjoyment of life. It brings together findings that are scattered throughout many studies and provides a basis for synthetic work.

### Size of the collections

1226 Happiness measures (Item Bank)  
 4258 Nations surveys in 206 Nations  
 149 Distinguished publics in 1199 studies  
 12032 Correlational findings in 1196 studies
