	Introduction		1
	•	Welfare; organization of the book	1
		Security	<u>^</u>
		Optimal welfare in security; security and development aid; 'worlds' distinguished; world decision-making	
	1 1	structure	5
	1.4	Welfare functions; diminishing marginal utility	4
		Satiation	
		A parabolic welfare function	5
		Survey of models used	0
		Appendix II. Sources of principal data	გ ი
	1.9	Appendix II: Sources of principal data	8
2	Two-worlds models		1 1
	2.1	East-West models: logarithmic utility	11
	2.2	Interpretation of the finding of high figures of security aid	1 1 5
	2.3	East-West models: two types of arms	17
	2.4	East-West models: parabolic welfare	20
	2.5	North-South models: logarithmic welfare	24
	2.6	North-South models: parabolic welfare	27
	2.7	The need for integrated models	28
3	Three-worlds models		29
	3.1	The need for three-worlds models: some alternatives	29
	3.2	Alternative sets of calculations	30
	3.3	The relationship between disarmament and development	33
	3.4	Three-worlds models with China in the Third World	34
	Four-worlds models		37
		Models in which China is considered as W4	37
	4.2	Four-worlds optimum with logarithmic welfare functions	38
	4.3	The separate negotiations on disarmament and	
i		development W3	40

1

vi	Contents
----	----------

	4.4	Comparison of the results of Sections 4.2 and 4.3	4			
	4.5	Solving the optimality problem otherwise	4			
	4.6	Summary and conclusions of Chapters 3 and 4	4.			
5	Twenty-worlds models: income distribution and a related					
	optimum criterion					
	•	Need for more detail; income distribution	4			
	5.2	Income distribution in three worlds: some examples	4.			
	5.3	Income distribution as another criterion of optimality	4			
6	Twenty-worlds models: the optimal geographical distribution of development assistance					
	6.1					
		world	5			
	6.2	Optimal development assistance in a twenty-worlds mode	1:			
		with logarithmic welfare functions	52			
	6.3	Parabolic welfare functions	55			
	6.4	A further refinement of the model on the donor countries'	•			
		side	59			
7	Dynamic models of development co-operation 6					
	7.1	Introduction	65			
	7.2	A one-year future: variables and relations considered	66			
	7.3	Estimates of the coefficients introduced and the initial				
		incomes	68			
	7.4	Gestation periods of five and ten years	71			
	7.5	Welfare over a period longer than one time unit	73			
	7.6	A concrete third criterion of optimality of development				
		co-operation	77			
	7.7	Equity vis-à-vis future generations	79			
3	Conclusions and future research					
	8.1	Introduction	81			
	8.2	Concrete proposals relating to security	87			
	8.3	Concrete proposals on development co-operation	88			
		Lacunae in scientific approach	89			
	8.5	Lacunae in research: theoretical lacunae	90			
	8.6	Lacunae in research: empirical lacunae	92
