

Stellingen

- 1) The decrease in diameter of the larger axons is not per se in contradiction with the existence of non-functioning axons (this thesis).
- 2) Magnetoneurography is an accurate and valuable evaluation of peripheral nerve regeneration (this thesis).
- 3) Delaying a nerve repair, following nerve injury, for 24 hrs might not only be beneficial for the doctor, but also for the patient (this thesis).
- 4) Contraction of nerve segments after transection is a phenomenon occurring by breaking a complex equilibrium between sheath and core, and cannot just be explained by the presence of elastine fibers in the epineurium (this thesis).
- 5) The intact nerve is stronger than the sum of its constituent parts (this thesis).
- 6) Ondanks dat het van groter naar kleiner alleen maar verder weg wordt, is het gezien de mogelijkheid tot grotere aantallen van de kleineren wellicht beter mogelijk om conclusies te trekken betreffende veel groteren.
- 7) It is the long-term vision that eventually outweighs the short-term success.
- 8) With the exponential increase in scientific journals the necessity for a journal of negative results decreases. However, the skill of reading becomes more and more essential.
- 9) Science exists because it is impossible for Man to grasp the full meaning of the Universe.
- 10) Een van de redenen waarom de armen arm blijven in de ontwikkelingslanden, is omdat er voor hen geen systeem is om de luttele bezittingen die ze hebben officieel te registreren (Gonneke Heerdink, vrij naar Hernando de Soto).
- 11) Who needs a Doctor in Philosophy, if one can be a Philosophical Doctor.
