Immunological Function of Draining Lymph Nodes in Multiple Sclerosis and Animal Models

1. Transfer of CNS antigens to the draining lymph nodes evokes immune responses that affect CNS disease.
(dit proefschrift)
2. The transfer of myelin lipids from the CNS to the draining lymph nodes is cell-mediated to preserve anti-inflammatory characteristics.
(dit proefschrift)
3. Inhalation of therapeutics to target cervical lymph nodes as well as the brain should be assessed as a treatment strategy for MS.
(dit proefschrift)
4. The antigen presenting capacity of macrophages is greatly underestimated.
(dit proefschrift)
5. The classification of antigen presenting cells into discrete categories does not appreciate the intermediate phenotypes within the continuum.
(dit proefschrift)
6. The way in which naïve T cells explore available antigen presenting cells is like the behavior of humans in a singles' bar.
(A.S. Shaw. Nature Immunology 2008; 9:229-230)
7. Things have no value in themselves. It is opinion and fashion that brings them into use, and gives them a value.
(N. Barbon. A discourse concerning coining the new money lighter 1696; 43)
8. Het gebruik van populair wetenschappelijke titels komt het begrip van de inhoud van een artikel niet ten goede.
9. Zolang Rotterdammers zich drukker maken over de pyjama van hun burgemeester dan zijn achtergrond, zit het wel goed met onze multiculturele samenleving.
10. Een conflict kent slechts slachtoffers.
11. A photographer gets people to pose for him. A yoga instructor gets people to pose for themselves.
(T. Guillemts)
