| Page 47  | 3rd alinea      | 6-24 mg HA should read 6-24 $\mu$ g HA   |
| Page 51  | 1st alinea      | 2.3 mg HA should read 2.3 $\mu$ g HA   |
| Page 54  | row 4           | Add:           Size        126<br>Dosages   3, 9, 33   |
| Page 56  | 5th alinea      | Alinea should read:<br><br>Stratification groups which include first and booster vaccinations were scored only once. Of 35 stratification groups for which PR-values could be calculated, eight (23%) showed a significant dose effect, either by a CI excluding 0 or by a significantly positive slope. With respect to response rates, in six out of 16 stratification groups (38%), a significantly increasing response rate for increasing doses was detected. In columns SIG of Appendices 3B and 3C, "+" indicates a statistically significantly higher value of the group with the higher dose. |
