

1. Overanticoagulation with an international normalized ratio above 6.0 are associated with a decline of renal function (*this thesis*)
2. There is no increased risk of hyponatremia with chlorthalidone compared to hydrochlorothiazide in an equipotent blood pressure lowering dose (*this thesis*)
3. Increased serum uric acid levels are associated with the presence of a simple renal cyst (*this thesis*)
4. Benzodiazepines increase the risk of hyponatremia, especially when combined with thiazides (*this thesis*)
5. Renal function monitoring in patients using antihypertensive therapy might be substantially improved. (*this thesis*)
6. "Although the absence of large-scale improvement is a cause for concern, it is not evidence that current efforts to improve safety are futile" - Christopher P. Landrigan et al. *N Engl J Med*. 2010
7. Pay for performance is like mopping up the floor around an overflowing sink without also turning off the faucet
8. "Things go wrong all at once, but things go right gradually" - *Tudisco's Asymmetry Principle*
9. "People commonly use statistics like a drunk uses a lamppost: for support rather than for illumination." - Mark Twain
10. "Pain is a nuisance, but dying is a nuisance, too" - *New York Times*, 2014
11. "Je gaat het pas zien als je het door hebt." - Johan Cruijff
