

Fundamental Principles underlying Motor Reflexes

Fundamentele beginselen die ten grondslag liggen aan Motor Reflexen

Thesis

to obtain the degree of Doctor from the
Erasmus University Rotterdam
by command of the
rector magnificus

Prof.dr. H.A.P. Pols

and in accordance with the decision of the Doctorate Board.
The public defence shall be held on

Tuesday 28 March 2016

Kuikui Zhou
Geboren te Qingdao(China)

Doctoral Committee:

Promotor: Prof.dr. C.I. De Zeeuw

Reading committee: Dr. F.E. Hoebeek
Prof.dr. S.A. Kushner
Prof.dr. Y. Shen

Copromotor: Dr. M. Schonewille

The work presented in this thesis was performed in the Department of Neuroscience at Erasmus MC in Rotterdam, The Netherlands.

The cover is modified from 'A Thousand Li of Rivers and Mountains' by Wang Ximeng (1096-1119)

Printed by Glideprint

Table of contents

Chapter 1	Introduction	7
1.1	Cerebellar circuitry	
1.2	Cerebellum related motor pathways	
1.3	Electrophysiological properties of Purkinje cells	
1.4	Cerebellar cortical activities in eye movement and locomotion	
1.5	Scope of the thesis	
Chapter 2	The role of GluA3 in PF-PC and CF-PC synapses	
2.1	Motor learning requires PF-PC synaptic potentiation through activation of GluA3	19
2.2	The role of AMPA receptor subunit GluA3 in complex spike responses in cerebellar Purkinje cells	49
Chapter 3	The role of cerebellar cortical plasticity /neurons in limb movements	
3.1	Cerebellar control of gait and interlimb coordination	61
3.2	Foxp2 disruptions in specific brain circuits differentially affect motor-skill learning	87
Chapter 4	Cerebellum-dependent motor function in mouse models of autism spectrum disorders	
4.1	Shared synaptic pathophysiology in syndromic and nonsyndromic rodent models of autism (Neurexins)	107
4.2	Dysfunctional cerebellar Purkinje cells contribute to autism-like behavior in Shank2-deficient mice	121
Chapter 5	Discussion	141
Chapter 6	Appendix
